7.Integrating a Zoho Creator Application with Another Zoho Service Using Connections and APIs

1. Aim

To integrate the **Job Application** (or Recruitment Portal) built in Zoho Creator with **Zoho Recruit** (or Zoho CRM) using Zoho Creator **Connections** and **Deluge APIs** to automatically push candidate profiles into the applicant tracking system upon form submission.

2. Objective

- Learn how to create and configure **Zoho Creator Connections** for secure authentication via OAuth 2.0.
- Utilize the Deluge `invokeurl` script task or built-in service tasks to communicate with external or sibling Zoho services.
- Automate business logic so that whenever a candidate submits a job application form, a matching Candidate/Candidate record is created in Zoho Recruit.

3. Prerequisites & Tools Required

- **Zoho Creator Account** with Developer or Enterprise permissions.
- **Zoho Recruit Account** within the same Zoho organization ecosystem.
- **Job Application** containing a form: `Candidate_Application` with fields:
  - `First_Name` (Single Line)
  - `Last_Name` (Single Line)
  - `Email_ID` (Email)

- `Phone_Number` (Phone)
- `Job_Position` (Dropdown: Software Engineer, Data Analyst, QA Engineer, etc.)
- `Resume` (FileUpload)

4. Step-by-Step Implementation Procedure

Step 1: Setting up the Connection in Zoho Creator

To securely pass data to Zoho Recruit without manually generating hardcoded OAuth tokens, establish a dedicated connection.

1. Open your **Job Application** app in Zoho Creator.
2. Navigate to **Settings** > **Connections** > Click **Create Connection**.
3. Select **Zoho Services** as the service provider.
4. Choose the appropriate scopes required for candidate creation (e.g., `ZohoRecruit.modules.ALL`).
5. Name the connection **`zoho_recruit_connection`** and click **Create and Authorize**.
6. Accept the permissions prompt to bind the connection successfully.

Step 2: Identifying the Target API Endpoint

For Zoho Recruit, the standard v2 API endpoint to create a candidate record is:

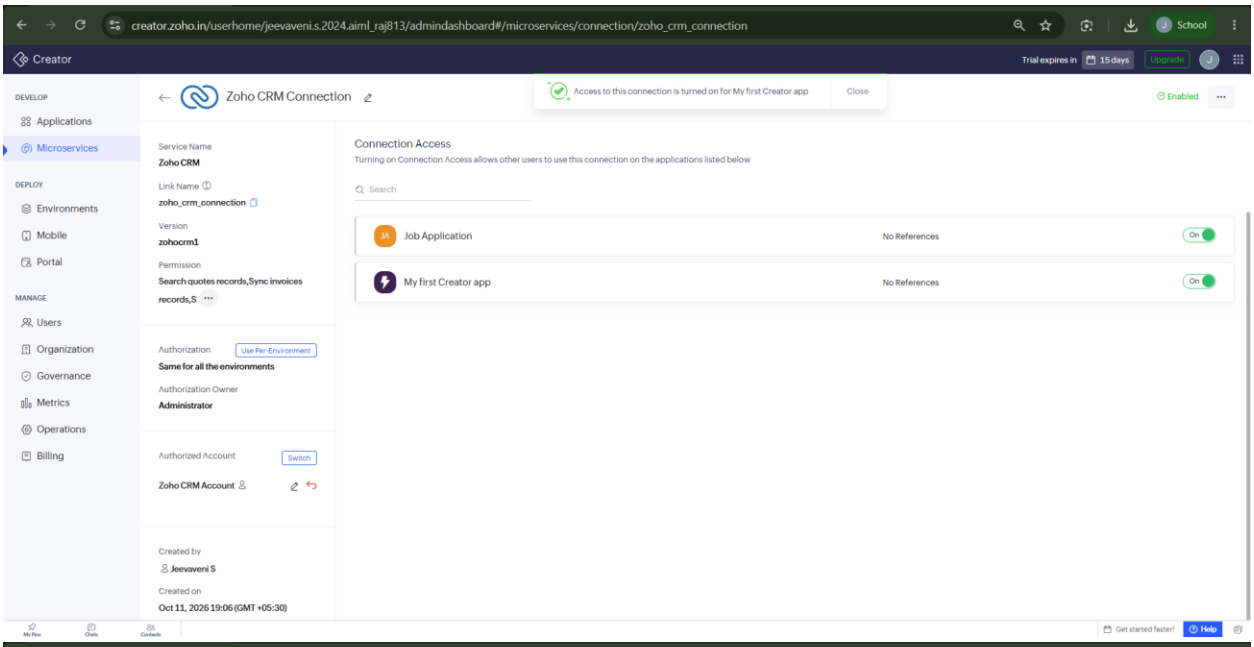

- **Method:** `POST`
- **URL:** https://www.zohoapis.com/recruit/v2/Candidates

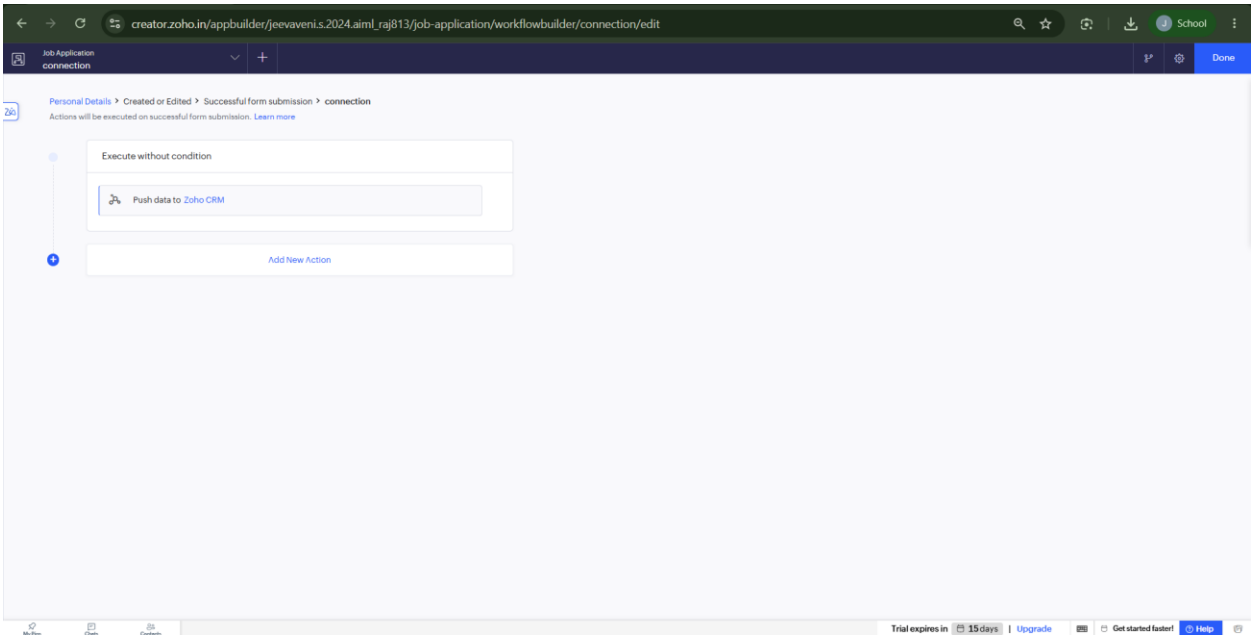

Step 3: Writing the Deluge Script

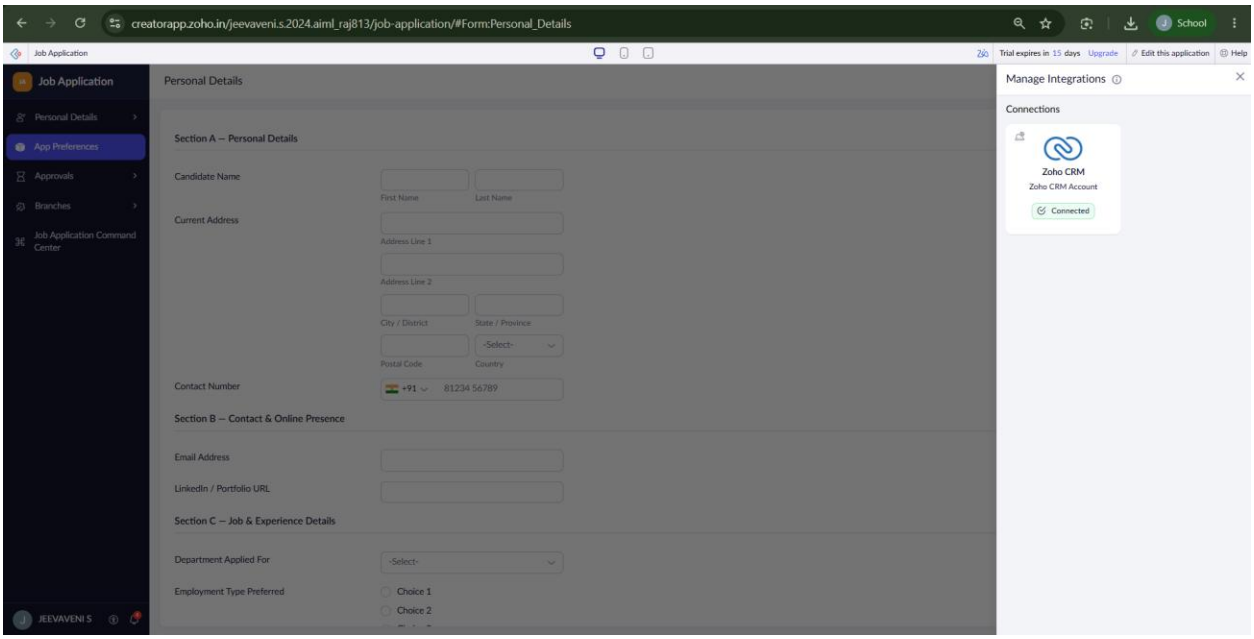

Configure a **Form Workflow** so that when a candidate applies via the portal, the script triggers automatically **On Success** of the `Candidate_Application` submission.

1. Go to **Workflows** > **Create Workflow** > **Form Workflow**.
2. Target the `Candidate_Application` form and select the trigger **Add -> On Success**.

Result:

The integration between the **Job Application** built in Zoho Creator and **Zoho Recruit** was successfully established using Zoho Creator **Connections** and Deluge APIs. This eliminates manual resume re-entry, accelerates candidate intake pipelines, and ensures end-to-end data synchronization.
